

Papermaking Science and Technology

a book series
covering the latest
technology and
future trends

Book 14

Process and Maintenance Management

Second Edition

Totally updated version

Book editor

Kauko Leiviskä, D.Sc. (Tech.), Professor, Department of Process and Environmental Engineering, University of Oulu

Publisher

Paper Engineers' Association/Paperi ja Puu Oy

Paperi ja Puu Oy

Table of Contents

1	Introduction.....	9
2	Technological issues	15
3	Methods	28
4	Special measurements in pulp and paper processes	72
5	Process control in the fibre line	95
6	Process control in chemical recovery	131
7	Process control in mechanical pulping	165
8	Managing paper machine operation	189
9	Introduction to Operations and Maintenance (O&M) management.....	235
10	Terminology.....	249
11	Fundamentals of maintenance management.....	261
12	Maintenance concepts	306
13	Service supply chain management.....	357
	Conversion factors.....	374
	Index.....	376

CHAPTER 1

Introduction

1	Introduction.....	10
---	-------------------	----

CHAPTER 2

Technological issues

1	Development of process automation	16
2	System architecture	17
2.1	Networks of systems.....	17
2.2	Integrating DCS and PLC.....	18
2.3	PC-based automation.....	18
2.4	Fieldbus technology	19
2.5	Networked control.....	20
2.6	Wireless.....	21
2.7	Software architectures.....	23
2.8	System security	23
2.9	“Plug-and-play” components.....	25
	References	26

CHAPTER 3

Methods

1	Open-loop vs. closed-loop control	30
2	Digital control algorithms	30
3	Automatic tuning and performance monitoring of PID control loops	32
3.1	Key functions	32
3.2	Test functions	33
3.3	Correlation analysis.....	35
3.4	Real-time performance monitoring.....	37
3.5	Åström's Autotuner.....	39
4	Adaptive control	39
4.1	Gain scheduling	40
4.2	Model reference control	40
4.3	Self-tuning control	40
5	Multivariable control	41
5.1	Basic concepts.....	41
5.2	Decoupling.....	42
5.3	Optimal state controller.....	42
6	Model Predictive Control	44
7	Expert systems	45
7.1	Operating principles.....	45
7.2	Expert systems in process control.....	46
7.2.1	Stabilising control	46
7.2.2	Supervisory control	47
7.3	Other applications.....	47
7.3.1	Diagnostics.....	47
7.3.2	Expert systems in scheduling	48
7.3.3	DSS applications.....	48

7.4	Advantages	48
7.5	Problems	49
8	Fuzzy logic control.....	49
8.1	What does fuzziness mean?.....	49
8.2	Fuzzy logic controller	50
8.2.1	Fuzzification.....	51
8.2.2	Fuzzy reasoning	51
8.2.3	Defuzzification	52
9	Neural networks	52
9.1	Basic definitions.....	52
9.2	How do the networks learn?.....	53
9.3	Network structures	53
9.3.1	Perceptron networks	53
9.3.2	Back propagation networks.....	55
9.3.3	Competitive learning	55
10	Genetic algorithms.....	55
11	Statistical process control	57
11.1	Presentation of quality data.....	57
11.2	Cause-and-effect analysis	58
11.3	Pareto analysis.....	58
11.4	Control charts	59
11.5	Cusum charts	60
11.6	Capability indices.....	60
11.7	Principal Component Analysis	61
11.7.1	Basic algorithm	61
11.7.2	PCA variants	63
12	Millwide optimisation methods.....	63
12.1	Production scheduling in pulp mills	63
12.2	Energy optimisation	65
12.2.1	Boiler load allocation.....	65
12.2.2	Turbine load allocation	66
12.2.3	Purchased power optimisation	66
	References	68

CHAPTER 4

Special measurements in pulp and paper processes

1	Introduction	74
2	Application-oriented special measurements	75
2.1	Pulp consistency	75
2.1.1	Mechanical sensors	75
2.1.2	Optical sensors	76
2.1.3	Absorption and scattering-based principles	77
2.1.4	Microwave consistency sensor	78
2.1.5	NIR consistency analyzer	79
2.2	Cooking process measurements	79
2.2.1	Kappa analyzers	80
2.2.2	Cooking liquid analyzer	80
2.3	Bleaching control sensors	81
2.4	Pulp quality analyzers	82
2.4.1	Freeness analyzers	82
2.4.2	Fibre length analyzers	83
2.4.3	Pulp quality monitor	83
2.4.4	PulpExpert	84
2.5	Wet end measurements	84
2.5.1	On-line cationic demand (anionic trash) measurement	86
2.5.2	Retention monitoring	86
2.5.3	Flocculation sensing	87
2.5.4	Air content measurement	88
3	On-line measurements of paper quality	88
3.1	Grammage	88
3.2	Moisture	89
3.3	Filler (ash) content	90

3.4	Formation	90
3.5	Fibre orientation.....	90
3.6	Caliper (paper thickness).....	90
3.7	Smoothness (roughness).....	91
3.8	Gloss	92
3.9	Opacity, colour and brightness	92
3.10	Porosity.....	92
3.11	Coat weight	93
3.12	Holes and dirt spots	93
	References	94

CHAPTER 5

Process control in the fibre line

1	Introduction.....	96
2	Continuous digester control.....	101
2.1	Control requirements	101
2.2	Basic control functions.....	102
2.3	Quality control.....	106
2.4	Species change management.....	108
2.5	Benefits	109
3	Batch digester control.....	109
3.1	Control requirements	109
3.2	Basic control functions.....	110
3.3	Cooking plant scheduling and steam levelling	112
3.4	Kappa number control.....	112
3.5	Tank farm control.....	114
3.6	Benefits	115
4	Brown stock washing control	116
4.1	Control requirements	116
4.2	Control functions.....	117
5	Bleach plant control	119
5.1	Control requirements	119
5.2	Oxygen delignification control	119
5.3	Chlorination stage control	120
5.4	Control in dioxide stages.....	122
5.5	Control of mechanical pulp bleaching.....	123
5.6	Load sharing.....	123
	References	125

CHAPTER 6

Process control in chemical recovery

1	Introduction.....	132
2	Evaporation plant control	134
2.1	Control requirements	135
2.2	Control functions.....	135
3	Recovery boiler control	137
3.1	Control requirements	137
3.2	Basic control functions.....	137
3.3	Soot blowing optimisation.....	141
3.4	Fire-room cameras, image analysis and expert systems.....	142
3.5	Dissolving tank control.....	145
3.6	Benefits	146
4	Causticising control.....	147
4.1	Control requirements	148
4.2	Control functions.....	148
4.3	Benefits	150
5	Lime mud filter control	151
5.1	Control requirements	151
5.2	Control functions.....	152
5.3	Benefits	153
6	Lime kiln control.....	153
6.1	Control requirements	153
6.2	Control functions.....	154
6.3	Advanced control systems for the lime kiln	157
6.4	Benefits	158
	References	159

CHAPTER 7

Process control in mechanical pulping

1	Refiner control	166
1.1	Control requirements	166
1.2	Control functions.....	167
1.3	Quality control.....	172
1.4	Quality control applications.....	174
1.5	Discussion	176
2	Grinding control	177
2.1	Control requirements	177
2.2	Grinding from a control viewpoint.....	177
2.3	Grinding process.....	178
2.4	Control functions.....	179
	2.4.1 Surface wear compensation.....	179
	2.4.2 Batch control.....	180
2.5	Grinding control strategy.....	182
	2.5.1 Grinding group control strategy.....	182
	2.5.2 Optimum operating point strategy	184
	References	186

CHAPTER 8

Managing paper machine operation

1	Goals of paper machine operation	190
2	Stock preparation, proportioning and wet end control	196
2.1	Measurement of flow and consistencies.....	196
2.2	Control of tank levels	198
2.3	Management of consistency variations.....	199
2.4	Broke and de-inked pulp as disturbances.....	203
2.5	Opportunities for flexible production through active operation of stock preparation.....	204
3	Web quality variations and defects, and the systems for measuring them	206
3.1	Components of variation	206
3.2	Scanning measurement	207
3.3	Camera and other web-wide measurement systems	211
3.4	Off-line measurements and quality management	212
4	Machine-direction control	213
4.1	Multivariate model-predictive control of paper quality: grammage, filler content, retention and moisture.....	213
4.2	Grade change automation: grammage and filler content changes.....	217
4.3	Other aspects of MD quality control.....	218
4.3.1	Control of multilayer products	218
4.3.2	Quality control based on off-line measurements.....	218
5	Cross-direction control	219
5.1	Static CD actuator optimisation	220
5.2	Dynamics of CD control.....	225
5.3	Some interaction effects in CD control	226
5.3.1	Effect of dilution water concentration on grammage CD control.....	226
5.3.2	Joint grammage and fibre orientation control	227
5.3.3	CD grammage control in multilayer products.....	228
	References	229
	Appendix	233

CHAPTER 9

Introduction to Operations and Maintenance (O&M) management

1	Business requirements	236
2	Mill level O&M management and its challenges	240
2.1	Introduction	240
3	OEE	241
3.1	Availability, A.....	242
3.2	Performance, P	242
3.3	Quality, Q	242
4	Inquiry concerning challenges in O&M management	245
5	Effect of maintenance on production function	247
	References	248

CHAPTER 10

Terminology

1	Introduction	250
2	Terminology.....	250
3	Standards.....	251
3.1	EN 13306:2001 Maintenance Terminology	252
3.2	Main terms	253
4	Commonly used abbreviations.....	258
4.1	Time-related abbreviations	258
4.2	Reliability analysis.....	259
4.3	Other commonly used abbreviations	259
	References	260

CHAPTER 11

Fundamentals of maintenance management

1	Life cycle and asset management	262
1.1	What is plant engineering asset management?	262
1.1.1	Strategic analysis.....	262
1.1.2	Conclusions from strategic analysis and performance	263
1.1.3	Optimal performance and development actions.....	264
1.2	Business requirements models	265
1.2.1	Maintenance function.....	265
1.2.2	Maintenance planning.....	266
1.2.3	Optimal levels of OEE and maintenance costs: empirical method.....	268
1.3	Capacity, investment and maintenance	271
1.4	Means and tools	273
1.5	Life cycle approach versus short-term approach	275
2	Objectives of maintenance	277
2.1	Why maintenance is needed: the hierarchical system of objectives	277
2.2	Some important definitions: Availability	278
2.3	Availability and reliability.....	279
3	Maintenance strategies	281
3.1	Definitions and terminology.....	281
3.2	Selection of maintenance strategy	282
3.3	Maintenance programme	284
4	Key performance indicators	288
4.1	Introduction	288
4.2	System of performance indicators.....	288
4.3	Views on the use of key performance indicators.....	291
4.4	Empirical relationship between objectives and exogenous variables.....	292
4.5	Benchmarking	294
4.6	Web-based benchmarking tool.....	297
5	EHSQ methods (Environmental, Health and Safety Quality)	301
	References	304

CHAPTER 12

Maintenance concepts

1	Plant-level maintenance management	308
1.1	Introduction	308
1.2	Unplanned maintenance (reactive maintenance)	309
1.3	Preventive maintenance	309
1.4	Predictive maintenance.....	310
1.5	Improved maintenance	312
1.6	Total productive maintenance	312
1.7	Computerised Maintenance Management System.....	313
2	Plant-level maintenance planning	315
2.1	Introduction to Reliability Centred Maintenance.....	315
2.2	How should RCM be done?	316
2.3	Basic idea of RCM analysis	316
2.4	Examples of RCM analysis	321
3	Organisation	323
3.1	Organisation types	324
3.2	A model for organising maintenance	327
3.3	Development trends.....	328
4	Condition-based maintenance	330
4.1	Introduction	330
4.2	Evaluation of processes and their components.....	330
4.3	Condition monitoring methods	331
4.4	System implementation	337
4.5	Diagnostics and prognostics	338
4.6	Data interpretation	344
5	Spare parts	345
5.1	Special features of pulp and paper machine spare parts	345

5.2	Pulp and paper machine parts	345
5.2.1	Headbox sheets	346
5.2.2	Suction roll seal strips	347
5.2.3	Doctoring spares	347
5.2.4	Sizing spares	348
5.2.5	Winder spares	350
5.3	Information on parts	350
5.4	Purchasing parts for a new installation	351
5.5	Parts stocking and asset management	352
	References	353

CHAPTER 13

Service supply chain management

1	Life cycle services and the service supply chain	358
1.1	Introduction	358
1.1.1	Terms and definitions.....	358
1.1.2	The challenge in life cycle services: aligning asset owner and service provider	359
1.1.3	Product-service systems	360
1.2	Capturing the potential to transform.....	361
1.2.1	Differentiation according to customer capabilities and needs	362
1.2.2	Obstacles and enablers	364
1.3	Alignment of industrial asset management and service supply chain.....	364
1.4	Checklist for getting started	365
2	Outsourcing of maintenance	367
2.1	Introduction	367
2.2	Industrial service categories.....	368
2.3	Life cycle cost optimisation	370
2.4	Conclusion	372
	References	373
