

Papermaking Science and Technology

a book series
covering the latest
technology and
future trends

Book 9

Papermaking Part 2, Drying

Second Edition

Totally updated version

Book editor

Markku Karlsson, D.Sc. (Tech.), Senior Vice President, Technology, UPM

Publisher

Paper Engineers' Association/Paperi ja Puu Oy

Paperi ja Puu Oy

Table of Contents

1	Introduction to paper drying and its principles.....	13
2	Fundamentals of paper drying	39
3	Multicylinder dryer and drying concepts.....	78
4	Air impingement drying	126
5	Drying of tissue.....	162
6	Drying of paperboard and packaging grades.....	211
7	Drying and paper quality.....	236
8	Automation in paper drying	296
9	Energy management.....	336
10	Steam and condensate systems	374
11	Drying section ventilation and heat recovery.....	436
12	Web handling	484
13	Dryer fabrics	542
14	Drives	578
15	Future outlook.....	617
	Conversion factors.....	626
	Index.....	628

CHAPTER 1

Introduction to paper drying and its principles

1	Introduction.....	14
2	Basic requirements for a modern drying section.....	16
2.1	Tasks and requirements for the drying section	16
2.2	Production speed	17
2.3	Production line efficiency	18
2.4	Space efficiency.....	19
2.5	Paper quality.....	19
3	Drying methods.....	19
4	Energy consumption in paper drying.....	21
5	Developments in paper machine drying technology.....	23
5.1	From two-tier to single-tier drying section.....	23
5.1.1	Two-tier configuration	23
5.1.2	Single-tier configuration.....	23
5.1.3	Web handling and runnability	24
5.1.4	Dryer fabrics	24
5.1.5	Inside the drying cylinder	25
5.1.6	Inside the hood	25
5.2	Alternative drying methods	26
5.2.1	Air dryers	26
5.2.2	Infrared dryers	27
5.2.3	High-intensity processes.....	28
5.2.4	Impingement drying	30
5.2.5	Steam drying	31
6	Modern drying section design and future trends.....	31
7	Conclusions and future outlook	33
	References	35

CHAPTER 2

Fundamentals of paper drying

1	Introduction.....	40
2	Properties of moist air	40
2.1	Moisture in air.....	40
2.1.1	Relative humidity of air.....	41
2.2	Specific enthalpy and specific heat of moist air.....	41
2.3	The <i>i/x</i> chart.....	42
2.4	Basic definitions.....	46
3	Drying process – the characteristic drying curve.....	47
4	Evaporation from the web	50
4.1	Vapour partial pressure.....	51
5	Sorption isotherm	52
5.1	Hysteresis.....	53
5.2	Heat of sorption	54
6	Boundary conditions for heat transfer.....	56
7	Influence of evaporation on convective heat transfer	57
8	Changes in web structure during drying	59
9	Capillary flow of free water.....	63
10	Movement of bound water	65
11	Vapour flow	66
12	Thermal conductivity of paper	69
13	Summary.....	73
	References	74

CHAPTER 3

Multicylinder dryer and drying concepts

1	Introduction.....	80
1.1	Cylinder dryer configurations	80
1.1.1	Double-felted configuration	80
1.1.2	Single-felted configuration	81
2	Basic design concepts for most common paper grades.....	82
2.1	Design concepts for different paper and board grades	82
2.1.1	Wood-containing printing papers (newsprint, LWC and SC).....	82
2.1.2	Woodfree papers.....	83
2.1.3	Linerboard machines.....	84
2.2	Basic requirements for cylinder drying with different paper grades	85
2.2.1	Newsprint	85
2.2.2	Woodfree papers.....	85
2.2.3	SC (supercalendered) and LWC (light weight coated) papers.....	86
2.2.4	Liner and fluting.....	86
2.2.5	Sack paper.....	86
2.3	Use of energy in multicylinder drying concepts.....	86
2.4	Drying section curl control	88
2.4.1	Double-felted drying section	89
2.4.2	Single-felted drying section.....	89
2.4.3	Curl control with impingement drying.....	90
3	Drying section components	91
3.1	Cylinders and vacuum rolls	91
3.2	Fabric lead rolls	91
3.3	Drying section runnability.....	91
3.4	Tail threading in cylinder drying section.....	93
3.4.1	Tail threading conditions in a cylinder drying section	94
3.4.2	Open draw between press and drying sections	95

3.4.3	Closed draw between press and drying sections	95
3.4.4	Ropeless tail threading through drying section	96
3.4.5	Threading through surface sizing unit with ropes	96
4	Heat transfer in cylinder drying	98
4.1	Total heat transfer coefficient	98
4.2	Periodic variation of dryer surface temperature	101
4.3	Condensate behaviour in the cylinder.....	101
4.3.1	Dryer drive power	102
4.3.2	Condensate oscillation	103
4.3.3	Condensate film thickness	104
4.4	Spoiler bars	105
4.5	Condensate coefficient.....	106
4.5.1	Dryer with smooth inner surface	106
4.5.2	Dryer with spoiler bars	108
4.6	Contact coefficient.....	108
4.6.1	Moisture content.....	108
4.6.2	Fabric or web tension.....	109
4.6.3	Cylinder and web smoothness.....	110
4.6.4	Number of fabric contact points	110
4.6.5	Air film between cylinder and web.....	110
4.6.6	Influence of cylinder temperature	111
4.6.7	Use of press roll to produce contact	112
5	Drying rate of multicylinder drying section.....	112
5.1	Dryer steam pressures.....	115
5.2	Other factors influencing drying rate	116
5.3	Drying section simulation.....	117
5.3.1	Single-layer model.....	117
5.3.2	Multilayer model	119
5.3.3	Example of simulation application	120
6	Future outlook and summary	121
	References	123

CHAPTER 4

Air impingement drying

1	Introduction.....	128
1.1	Direct impingement	129
1.2	Indirect impingement.....	129
2	Impingement heat transfer.....	130
2.1	Hydrodynamics of the impingement flow	131
2.2	Impingement flow – process description.....	131
2.3	Conventional empirical correlation for impingement heat transfer	132
3	Influences of process parameters on impingement heat transfer	134
3.1	Effect of evaporation on heat transfer	135
3.2	Effect of surface movement on heat transfer	136
3.3	Effect of jet angle on heat transfer	136
3.4	Effect of through-flow on heat transfer	137
3.5	Effect of the cross-flow	137
3.6	Effect of large temperature differences	138
4	Experimental determination of convective heat transfer coefficient (CHTC).....	138
4.1	Influence of thermal radiation on total heat transfer	139
4.2	Empirical correlation for impingement heat transfer	140
4.3	Modelling of the impingement heat transfer process.....	141
5	Impingement dryer design considerations.....	141
5.1	Heat transfer coefficient.....	142
5.2	Geometry optimization	142
5.3	Drying parameters	143
5.4	Optimal air-system.....	144
5.5	Heat recovery system	144
5.6	Control system.....	144
5.7	Thermal expansions.....	145
5.8	Energy consideration	145

6	Impingement drying applications	145
6.1	Impingement dryer with big vacuum roll	145
6.2	Impingement dryer with big vacuum rolls immediately after press section	148
6.3	Impingement dryer on small vacuum rolls	148
6.4	Impingement dryer on grooved rolls	149
	6.4.1 Design concept for increasing production capacity	149
6.5	Design concept for beginning of drying section with grooved supporting rolls	152
	6.5.1 Draw management with cylinder drying section	152
	6.5.2 Technology	153
	6.5.3 Drying capacity	154
7	Draw management	154
8	Bulk saving potential with copy paper	154
9	Sticking prevention with impingement drying	155
10	Summary	156
	References	157
	Nomenclature	160

CHAPTER 5

Drying of tissue

1	Introduction.....	164
2	Yankee drying	164
2.1	Tissue drying process	164
2.1.1	Fundamentals of heat and mass transfer in tissue drying	166
2.1.2	Sheet adhesion	169
2.1.3	Dryer coating	170
2.1.4	Chemicals for controlling coating and sheet adhesion	171
2.1.5	Yankee doctors.....	171
2.1.6	Web structure and properties	172
2.2	Yankee dryer design	173
2.2.1	General description	173
2.2.2	Manufacturing and materials.....	174
2.2.3	Cylinder design	174
2.2.4	Steel Yankee drying cylinders in tissue machines	178
2.3	Steam and condensate system for a tissue Yankee dryer	179
2.3.1	Design and functional description.....	179
2.4	Safety considerations.....	181
2.4.1	Stress analysis.....	181
2.4.2	Deformation analysis.....	182
2.5	Reconditioning of Yankee cylinders by thermal spraying	184
3	Yankee hood drying, ventilation and heat recovery	185
3.1	Yankee hood drying process.....	185
3.2	Yankee hood	185
3.2.1	Yankee hood types	186
3.2.2	Design criteria.....	186

3.3	Yankee hood ventilation	187
3.3.1	Yankee hood air systems.....	187
3.3.2	Yankee hood air profiling	189
3.3.3	Yankee hood air balancing systems.....	191
3.3.4	Tissue machine energy balance	191
3.3.5	Yankee hood retraction mechanism.....	192
3.3.6	Auxiliary equipment of Yankee hood	192
3.3.7	Process air fans	193
3.3.8	Air heating	194
3.4	Yankee section heat recovery.....	194
3.4.1	Heat recovery from exhaust air	194
3.5	Control systems	195
3.6	High-temperature hood.....	196
4	Through-air drying of tissue (TAD)	197
4.1	Description of the through-air drying process.....	198
4.2	Through-air drying vs. other drying methods.....	199
4.2.1	Drying rates	199
4.2.2	Product properties.....	200
4.2.3	Production costs	201
4.3	Different machine configurations	201
5	Advantages of hybrid technologies in making high-quality tissue paper	202
5.1	ATMOS tissue concept	202
5.2	Advantage NTT tissue making concept.....	205
6	Summary.....	207
	References	209

CHAPTER 6

Drying of paperboard and packaging grades

1	Introduction.....	212
2	Containerboards	213
2.1	Layout	213
2.2	Design criteria and drying rate	215
2.3	Effect on board quality	216
2.4	Sack paper	217
2.5	Other drying methods	218
	2.5.1 Condebelt drying	218
	2.5.2 High Efficiency Dryer	221
3	Cartonboards	223
3.1	Layout	223
3.2	Design criteria and drying rate	225
3.3	Effect on board quality	227
3.4	Metal belt calender	227
4	Speciality papers and boards.....	229
4.1	Machine glazed drying for wrapping paper.....	229
5	Heat and mass transfer considerations in paper and paperboard finishing and converting.....	230
5.1	General	230
5.2	Corrugated board manufacture	230
	5.2.1 Preheating, preconditioning and corrugating	231
	5.2.2 Gluing	232
	5.2.3 Preheater tower	232
	5.2.4 Double-facer	232
6	Summary.....	233
	References	235

CHAPTER 7

Drying and paper quality

1	Introduction	238
2	Drying of a single fibre	238
2.1	Fibre shrinkage and removal of water fractions	238
2.2	Inter-fibre bonding	240
2.3	Mechanical properties of fibres	241
3	Impacts of fibre morphology during drying	243
3.1	Plasticity and viscoelasticity of material	243
3.2	Fibre softening	243
3.3	Hornification of cellulose fibres	245
3.4	Fibre sticking and adhesion to cylinder surface	246
4	Drying of a paper web	249
4.1	Different phases of paper drying	250
4.2	Drying and web rheology	251
4.3	Creep and tension relaxation	251
5	Paper shrinkage during drying	252
5.1	Definitions of drying stresses and deformations	252
5.2	Paper deformation during drying	253
5.3	In-plane shrinkage	253
6	Development of mechanical properties of a web	255
6.1	Effects of machine-direction draw during drying	257
6.2	Effects of cross-direction shrinkage during drying	258
6.3	Development of hydrogen bonding of the web during drying	259
7	Web peeling from press roll	261
7.1	Tension relaxation of the wet web	263
8	Effects of drying temperature on paper quality	265
9	Web drying in thickness direction	269

10	Flatness deviations.....	270
10.1	Challenges caused by efficiency improvement	270
10.2	Curl.....	271
10.2.1	One-sided drying	272
10.2.2	Asymmetric moisture treatment	273
10.2.3	Curl and its control	274
10.3	Cockling	275
10.3.1	Streakiness and waviness in machine direction	276
10.3.2	Lumpiness	280
11	Drying-induced profiles of a web	280
11.1	Shrinkage profile of a web	281
11.2	Tension profile of a web	283
12	Drying of paper coatings and surface size.....	285
12.1	Drying of precoat and surface size	285
12.2	Drying strategy and quality in pigment drying	285
13	Moisture changes in printing and end use	287
13.1	Heatset waviness	287
13.2	Stack waviness.....	288
14	Development trends	289
	References	290

CHAPTER 8

Automation in paper drying

1	Introduction.....	298
1.1	Control theory – opportunities and limitations	299
1.2	Water to be removed in papermaking.....	302
1.3	Cylinder drying and steam system	302
1.4	Disturbances to be eliminated by automation.....	302
1.5	Paper quality measurements and problems in paper scanning	303
1.6	MD and CD controls.....	303
1.7	Grade changes.....	304
2	Cylinder drying and steam system	304
2.1	Cylinder drying.....	304
2.2	Steam and condensate system	305
2.3	Capability to control moisture level in paper	307
3	Paper quality measurements	308
3.1	Scanning measurement	308
3.2	Control challenges related to measurement principle	309
4	Steam box	310
4.1	Product and its applications	310
5	Moisturising system	312
5.1	Product and its applications	312
6	MD controls	314
6.1	Products and applications.....	314
6.2	Dryer control concept.....	316
6.3	Stock preparation and wet end controls	318
6.4	MPC based control of paper moisture.....	319
7	Impingement drying	319
8	Hood and heat recovery management.....	321

9	CD controls	323
9.1	Products, technologies and applications.....	323
9.2	CD moisture control	326
9.3	MPC technology for CD moisture control	328
10	Grade change	328
11	Development opportunities	331
	References	334

CHAPTER 9

Energy management

1	Energy generation and use in integrated pulp and paper mills.....	338
1.1	Introduction	338
1.2	Energy use at integrated mills.....	340
1.2.1	Energy use in unit processes	340
1.2.2	Energy quality	341
1.2.3	Influence of paper drying method on energy use	341
1.3	Energy production at integrated mills	342
1.3.1	Energy balances.....	342
1.3.2	Energy system design	344
1.3.3	Benefits of integration	344
1.3.4	Trends in energy use and their consequences	347
1.3.5	Fuel quality improvement by drying.....	348
1.4	Energy efficiency	349
1.4.1	Energy efficiency indicators	349
1.4.2	Conceptual challenges related to energy efficiency	350
1.4.3	Energy efficiency management	351
1.4.4	Process systems analysis methods	353
1.4.5	Total efficiency aspects	355
2	Energy management at paper machine level	356
2.1	Drying section as part of an integrated mill	356
2.2	Benchmarking papermaking energy consumption	357
2.3	PM line energy consumption allocation	359
2.4	Drying section energy consumption and related factors	361
2.4.1	Electricity consumption	362
2.4.2	Heat consumption	363
2.4.3	Energy efficiency of different drying methods.....	366

2.4.4 Energy efficiency analysis based on automation system data 367

2.4.5 Energy efficiency monitoring 367

2.4.6 Example of energy efficiency program..... 368

2.5 Future development of energy efficiency in papermaking..... 369

References 371

CHAPTER 10

Steam and condensate systems

1	Introduction	376
2	Steam requirements	378
2.1	Steam pressure	379
2.2	Steam temperature	379
3	Equipment	380
3.1	Condensate tanks	381
3.2	Condenser	382
3.3	Condensate pumps	382
3.4	Vacuum pumps	383
4	Design criteria of steam drying systems	383
4.1	General	383
4.2	Design principles by cylinder dryer configuration	383
4.3	Design principles by grade	385
5	Dryers condensing and condensate removal	386
5.1	Steam and condensate connections	388
5.2	Condensate removal equipment	389
5.2.1	General	389
5.2.2	Stationary siphon	391
5.2.3	Rotary siphon	397
5.3	Controlling pressure and differential pressure	402
5.3.1	General	402
5.3.2	Differential pressure control	403
5.3.3	Flow control	404
6	Steam and condensate systems	404
6.1	Cascade system	405
6.1.1	Operating and design principles	405
6.1.2	Division of steam sections	407

6.1.3	Applications	409
6.1.4	Advantages and disadvantages of cascade systems.....	412
6.1.5	Simulation.....	412
6.2	Thermocompressor systems	413
6.2.1	Construction and operation of a thermocompressor.....	413
6.2.2	Performance	415
6.2.3	Thermocompressor pressure control system.....	418
6.2.4	Thermocompressor pressure control system with differential control valve.....	419
6.2.5	Dryer differential control using the thermocompressor spindle	419
6.2.6	Advantages and disadvantages of thermocompressor systems	421
6.3	Cascade thermocompressor system.....	421
6.4	Thermocompressor system for Yankee dryer.....	423
6.5	Vacuum control and air venting	424
7	Heating air with steam	426
7.1	General	426
7.2	Applications	427
8	Heating water with steam	429
8.1	General	429
8.2	Applications	430
9	Condensate recovery and return.....	430
10	Development trends.....	432
	References	433
	Appendix	434

CHAPTER 11

Drying section ventilation and heat recovery

1	Introduction.....	438
2	Drying section air systems.....	439
2.1	Design criteria	439
2.2	Drying section hood	440
2.2.1	Hood types.....	440
2.2.2	Exhaust air humidity.....	441
2.2.3	Dew point	442
2.2.4	Pressure levels and air balance	442
2.2.5	Air handling in the closed hood	444
2.2.6	General aspects of hood design.....	445
2.3	Drying section ventilation.....	446
2.3.1	Pocket ventilation concepts.....	447
2.3.2	Pocket ventilation for different paper and board grades.....	448
2.3.3	Ventilators for single-felting	449
2.3.4	Pocket ventilation parameters	450
2.3.5	Profiling by means of ventilation.....	451
2.3.6	Supply air distribution	451
2.4	Integration of drying section air systems and sheet runnability systems	452
2.4.1	Design criteria related to sheet runnability systems.....	453
3	Drying section heat recovery	454
3.1	Drying section energy balance	454
3.2	General aspects of drying section energy use and management	459
3.2.1	Process parameters	459
3.2.2	Control systems	461
3.2.3	Heat recovery systems.....	461
3.2.4	Process improvements.....	462
3.2.5	Application of new technologies.....	462

3.3	General basis for heat recovery system design.....	463
3.4	Energy prices.....	464
3.5	Continuity	465
3.6	Heating requirements.....	466
3.7	Basic types of heat exchanger	467
	3.7.1 Air/air heat exchangers	467
	3.7.2 Air/water heat exchangers	468
	3.7.3 Scrubbers	469
	3.7.4 Air coils.....	469
3.8	Different types of heat recovery system	470
	3.8.1 Earlier types of heat recovery system	470
	3.8.2 Contemporary heat recovery system designs	471
	3.8.3 High-temperature heat recovery.....	472
	3.8.4 Heat recovery in air dryers for coating.....	472
	3.8.5 Heat recovery in pulp dryers	473
	3.8.6 Other applications.....	473
	3.8.7 Sizing and optimisation of heat recovery systems	474
	3.8.8 Design criteria for heat recovery equipment	475
4	Environmental aspects related to drying section ventilation	475
4.1	Sound attenuation.....	475
	4.1.1 Absorptive (resistive) silencers	477
	4.1.2 Reactive silencers	477
4.2	Plume remediation.....	478
5	Process ventilation control	479
5.1	Basic control system.....	479
5.2	Energy management systems	480
6	Development trends and future concepts in paper machine ventilation	481
	References	483

CHAPTER 12

Web handling

1	Introduction.....	486
2	Dynamics of a moving web.....	487
2.1	Forces influencing a web	488
2.1.1	External forces	488
2.1.2	Acceleration forces in out-of-plane direction of the web	490
2.2	Thread-line model.....	491
2.2.1	Longitudinal wave equation.....	491
2.2.2	Out-of-plane wave equation.....	492
3	Material properties of a web	493
3.1	Rheology of a web	493
3.2	Models of web rheology	500
3.2.1	Uni-axial models	500
3.2.2	Multi-axial models.....	503
4	Aerodynamics of moving webs.....	504
4.1	Boundary layers on a flat plate.....	504
4.2	Pressure development in pockets.....	505
4.3	Web flutter and aerodynamic added mass.....	507
4.3.1	Effect of geometry on web flutter	507
5	Air flows and runnability systems in drying section.....	508
5.1	Paper machine speed development	508
5.2	Air flow-induced runnability problems.....	509
5.3	Double-felted drying sections.....	510
5.4	Single-felted drying sections.....	510
5.4.1	Single felting with small-diameter vacuum roll	511
5.4.2	Single felting with grooved larger-diameter vacuum roll	512
5.4.3	Drying section geometry with perforated bottom rolls	515
5.5	Principle for application of runnability systems.....	516

6	Fluid flow analysis and computational fluid dynamics	516
7	Web tension	519
7.1	Strain behaviour of a moving web	519
7.2	Unsupported web.....	520
	7.2.1 Tension behaviour of steady-state web	520
	7.2.2 Tension behaviour of unsupported continuous web.....	521
7.3	Tension behaviour of a supported web	525
	7.3.1 Effects of fabrics on strain behaviour.....	525
8	Two-dimensional planar strain and tension fields.....	526
8.1	Planar stationary elastic and visco-elastic web	526
8.2	Effects of the moving web.....	527
8.3	Internal strains and shrinkages	528
8.4	Tension profile	529
9	Future trends in web handling	532
	References	533
	Nomenclature	539

CHAPTER 13

Dryer fabrics

1	Introduction.....	544
2	Role of dryer fabrics in paper drying.....	544
2.1	Fabric as part of the drying process	546
2.1.1	Heat transfer	546
2.1.2	Evaporation.....	548
2.1.3	Ventilation.....	549
2.1.4	Air permeability.....	551
2.2	Web support and runnability.....	551
2.2.1	Effects of fabrics in air transport	553
2.2.2	Fabric-to-web contact and CD web shrinkage control	554
2.2.3	Effects of dryer fabrics on web strain behaviour and speed differences	557
2.2.4	Dryer fabric marking	559
3	Dryer fabric structures	560
3.1	Raw materials.....	560
3.2	Traditional and modern structures.....	563
3.3	Seams	564
3.4	Dryer fabric dimensions	565
4	Selection of dryer fabric type.....	566
4.1	Dryer fabrics for impingement drying units	567
5	Operative use	568
5.1	Installation	568
5.2	Guiding	568
5.3	Cleaning	569
5.3.1	Consequences of contamination.....	569
5.3.2	Types of contaminant.....	569
5.3.3	Fabric application and cleaning recommendations	570

6	Clothing follow-up service	572
6.1	Fabric inspections.....	573
6.2	Troubleshooting	574
6.3	Optimising tools.....	574
7	Future dryer fabrics	575
	References	576

CHAPTER 14

Drives

1	Introduction.....	580
2	Dimensioning and selection of components	580
2.1	General principles.....	580
2.2	Dimensioning of mechanical drives.....	581
2.2.1	Criteria for selecting separate transmissions.....	582
2.2.2	Criteria for selecting couplings and universal shafts	583
2.3	Dimensioning of electrical drives.....	586
3	Mechanical drives.....	587
3.1	Main shaft drives	587
3.1.1	Belt drives.....	588
3.1.2	Differential drives.....	588
3.2	Sectional drives	589
3.2.1	Separate transmissions.....	591
3.2.2	Roll gearbox.....	593
3.2.3	Drying section drives.....	595
4	Electrical drives	597
4.1	History.....	597
4.2	Variable-speed drive	597
4.2.1	DC drives	597
4.2.2	AC drives with asynchronous induction motors.....	598
4.2.3	AC drives with synchronous permanent magnet motors	600
4.3	Sectional drive system	600
4.3.1	AC or DC drive with a speed reduction gear.....	601
4.3.2	Direct drive without speed reduction gear	602
4.3.3	Machine integrated motor	603
4.4	Energy efficiency of drive system.....	603

4.5	Controls	604
4.5.1	Different running modes.....	605
4.5.2	Different control modes.....	605
4.5.3	Control modes in a paper machine	606
4.5.4	Speed reference chain	607
4.6	Control performance	609
4.6.1	Configuration	609
4.6.2	Control accuracy and resolution	609
4.6.3	Static accuracy	609
4.6.4	Dynamic accuracy.....	610
4.6.5	Paper transport considerations.....	610
4.6.6	Controllers	611
4.7	Operator interfaces	613
4.7.1	Local control devices.....	613
4.7.2	Supervisory systems	614
4.8	Maintenance tools.....	614
5	Future of drives.....	615
	References	616

CHAPTER 15

Future outlook

1	Drying concepts.....	618
2	Energy management	620
3	Ventilation, heat recovery and runnability systems	620
4	Paper and board grades	621
5	Other drying section systems	622
6	Modelling and simulation of complicated interactions in paper drying	623
7	Conclusion.....	624
	References	625
