

Papermaking Science and Technology

a book series
covering the latest
technology and
future trends

Book 2

Forest Resources and Sustainable Management

Second Edition

Totally updated version

Book editor

Seppo Kellomäki, Dr., Professor, Faculty of Forest Sciences, University of Joensuu

Publisher

Paper Engineers' Association/Paperi ja Puu Oy

Table of Contents

1	Introduction	9
2	Trees, forests and forest ecosystems	14
3	Global forest resources	97
4	Structure and properties of wood and woody biomass	133
5	Forest inventories and planning	216
6	Management of forest ecosystems.....	252
7	Timber procurement.....	374
8	Timber measurement	432
9	Wood markets and the cost of wood	475
10	Global forest related policies and governance.....	490
11	The forest sector in a local and global context.....	547
	Appendix	561
	Conversion factors.....	562
	Index.....	564

CHAPTER 1

Introduction

1	Forests — resources for many purposes	10
2	Sustainability — challenges for management and use of forest land.....	11
3	Objectives and scope of this book.....	12

CHAPTER 2

Trees, forests and forest ecosystems

1	Introduction.....	16
1.1	Concepts	16
1.2	Tree taxonomy	17
2	Structure of a tree.....	24
2.1	Concepts	24
2.2	Structure of wood	25
2.3	Bark.....	26
2.4	Leaves and needles	27
2.5	Roots	28
3	Functioning of a tree.....	29
3.1	Concepts	29
3.2	Photosynthesis.....	30
	3.2.1 Biochemistry	30
	3.2.2 Photosynthetic production of trees	32
3.3	Transpiration.....	34
3.4	Respiration	35
3.5	Growth.....	38
	3.5.1 Concepts and components of growth	38
	3.5.2 Height and radial growth	38
	3.5.3 Height and diameter growth under climate change.....	41
	3.5.4 Growth over life span	43
	3.5.5 Distribution of growth in a tree and the allometry of a tree	44
3.6	Mortality	45
3.7	Reproductive processes	48
4	Trees in ecosystems and dynamics of the forest ecosystem	49
4.1	Concepts	49

4.2	Functioning and structure of ecosystems	51
4.3	Feedback through energy fixation	52
4.4	Feedback through nutrient cycles.....	55
4.4.1	Nutrients in tree biomass	55
4.4.2	Geobiotic cycles affecting availability of nutrients	55
4.4.3	Decay of organic matter and availability of nutrients.....	57
4.5	Feedback through hydrological cycle.....	62
4.6	Succession of ecosystem over time	66
4.7	Productivity of the forest ecosystem	71
4.7.1	Concepts.....	71
4.7.2	Carbon exchange between atmosphere and forest ecosystem.....	71
4.7.3	Growth and yield	75
5	Trees in ecosystems under climate change	79
5.1	Global climate change.....	79
5.1.1	Concepts.....	79
5.1.2	Global changes in atmospheric properties	79
5.1.3	Observed changes in global climate	79
5.1.4	Future expectations.....	80
5.2	Impacts of global climate change on vegetation	82
5.2.1	Mechanisms in short term.....	82
5.2.2	Mechanisms in long term.....	83
5.3	Global impacts on structure and functioning of forests	85
5.4	Local impacts on structure and functioning of forests.....	87
5.4.1	Outlines for a case across managed boreal forests.....	87
5.4.2	Changes in temperature and precipitation	87
5.4.3	Impacts on growth	88
5.4.4	Impacts on tree species composition.....	90
5.4.5	Impacts on potential cutting drain	91
5.4.6	Impacts on carbon sequestration	91
	References	93

CHAPTER 3

Global forest resources

1	Biosphere, vegetation zones and forest formations.....	98
1.1	Biosphere	98
1.2	Vegetation zones	99
1.3	Forest formations.....	100
1.3.1	Boreal forests.....	100
1.3.2	Temperate forests	100
1.3.3	Tropical forests	101
2	Forest biomass and productivity.....	102
3	State of global forest resources.....	104
3.1	Concepts	104
3.2	Forest cover	104
3.3	Growing stock and removals.....	107
3.4	Production and consumption of roundwood.....	110
3.5	Conservation of forests	113
3.6	Forest health and vitality	115
3.7	Wood energy.....	117
3.8	Climate change.....	118
3.9	Forest plantations	121
3.9.1	The concept of forest plantations	121
3.9.2	Global plantation resources	122
4	Future role of forest resources.....	124
4.1	Future development and utilisation of forest resources.....	124
4.2	Role of forest plantations in biomass and timber supply	126
4.3	Trends in plantation development.....	127
	References	130

CHAPTER 4

Structure and properties of wood and woody biomass

1	Biomass components of trees.....	134
1.1	Introduction	134
1.2	Crown mass.....	135
1.3	Stump and root wood.....	138
2	Wood as a raw material for pulp and paper	139
2.1	Macroscopic characteristics of wood	139
2.2	Formation of wood	142
2.3	Chemical composition of wood.....	145
	2.3.1 Concepts	145
	2.3.2 Primary cell wall constituents.....	148
	2.3.3 Extractives	150
	2.3.4 Inorganic components.....	153
2.4	Structure of the cell wall	155
2.5	Woody cells	158
	2.5.1 Concepts.....	158
	2.5.2 Softwood cells	161
	2.5.3 Hardwood cells	164
2.6	Irregularities in wood	168
	2.6.1 Juvenile wood.....	168
	2.6.2 Reaction wood	171
	2.6.3 Heartwood	175
	2.6.4 Knots	178
2.7	Moisture content of wood.....	182
2.8	Basic density of wood	184
2.9	Bark.....	196
3	Wood as a raw material for energy.....	200
3.1	Wood-based energy	200
3.2	Heating value of wood and bark.....	202
4	Recycled wood fibres and non-wood fibres as raw materials for pulp and paper.....	204
	References	209

CHAPTER 5

Forest inventories and planning

1	Forest inventories	218
1.1	Concepts	218
1.2	Tree measurement.....	218
1.3	Measurement of a forest stand	220
	1.3.1 Stand and compartment.....	220
	1.3.2 Stand characteristics.....	221
	1.3.3 Site characteristics.....	222
	1.3.4 Forest stand plot	222
	1.3.5 Compartment inventory.....	223
1.4	Large area inventory	224
	1.4.1 Sampling concepts.....	224
	1.4.2 Simple random sampling.....	225
	1.4.3 Systematic sampling	227
	1.4.4 Stratified sampling	227
	1.4.5 Cluster sampling	228
	1.4.6 Two-phase sampling	230
1.5	Use of remote sensing in forest inventories	230
	1.5.1 Aerial photographs	230
	1.5.2 Satellite images	231
	1.5.3 Laser scanning.....	232
2	Forest management planning	233
2.1	Concepts	233
2.2	Cutting budget methods.....	233
2.3	Planning based on stand economy	234

- 2.4 Mathematical programming235
 - 2.4.1 Optimisation techniques available235
 - 2.4.2 Linear programming.....236
 - 2.4.3 Goal programming237
- 2.5 Heuristics methods238
 - 2.5.1 Problem formulation.....238
 - 2.5.2 Outlines of numerical heuristics240
 - 2.5.3 Simulated annealing240
 - 2.5.4 Tabu search242
 - 2.5.5 Genetic algorithms242
 - 2.5.6 Cellular automata.....243
- 2.6 Including non-timber benefits into forest planning.....245
 - 2.6.1 Non-timber products245
 - 2.6.2 Recreation amenities246
 - 2.6.3 Hunting and game.....248
 - 2.6.4 Biodiversity248
 - 2.6.5 Environmental services249
- 2.7 Risks250
- References251

CHAPTER 6

Management of forest ecosystems

1	Introduction.....	256
1.1	Ecosystem services in forest production.....	256
1.2	Management and forest succession.....	256
1.3	Forest structure and ecosystem services.....	257
1.4	Management measures	259
2	Processes and measures to establish tree populations	262
2.1	Concepts	262
2.2	Measures for natural regeneration	262
	2.2.1 Factors affecting the regenerative process.....	262
	2.2.2 Factors affecting the success of the regeneration process.....	264
	2.2.3 Techniques and applications	265
2.3	Measures for regeneration through planting.....	267
	2.3.1 Factors affecting the regeneration process.....	267
	2.3.2 Tree species selection.....	268
	2.3.3 Provenance selection	269
	2.3.4 Seedlings for planting	269
	2.3.5 Techniques and applications	270
2.4	Genetic improvement and tree breeding for forest plantations.....	271
	2.4.1 Concepts	271
	2.4.2 Tree breeding	273
	2.4.3 Traits applied in breeding.....	277
	2.4.4 Rules to control the trade in seeds and seedlings	279
	2.4.5 Results obtained in improving genotypes for reforestation.....	281
2.5	Future challenges for tree breeding	282
	2.5.1 Climate change.....	282
	2.5.2 Genetic diversity	283
	2.5.3 Use of biotechnology in tree breeding.....	283

3	Processes and measures to promote the growth of established tree populations	284
3.1	Growth and need for growing space.....	284
3.1.1	Space, growth and mortality.....	284
3.1.2	Mass and density in tree populations	286
3.1.3	Space and differentiation of tree size	287
3.2	Thinning and impacts on availability of resources.....	288
3.2.1	Concepts.....	288
3.2.2	Impacts on radiation in canopy and crowns.....	289
3.2.3	Impacts on soil water	291
3.2.4	Impacts on nutrient availability	292
3.3	Thinning regimes	293
3.3.1	Concepts	293
3.3.2	Growth of trees and productivity of a tree population.....	294
3.4	Thinning rules	296
3.4.1	Outlines	296
3.4.2	Timing and intensity of thinning	296
3.4.3	Length of rotation.....	297
3.4.4	Thinning programme over a rotation.....	298
3.5	Management of tree species mixtures.....	298
3.6	Management for mitigation of climate change and its impacts	299
3.6.1	Management to sequesterate carbon for mitigating climate change	299
3.6.2	Management to adapt to climate change.....	302
4	Processes for improving timber quality	304
4.1	Effect of spacing and thinning on knots in wood.....	304
4.2	Effect of pruning on knots in wood	307
4.3	Effect of spacing on basic density of wood	308
4.4	Effects of climate change on properties of wood	308
5	Management of nutrient resources and site fertility	309
5.1	Concepts	309
5.2	Site preparation in managing site fertility	310
5.2.1	Mechanical preparation	310
5.2.2	Ditching	311
5.2.3	Prescribed burning	311

CHAPTER 6

5.3	Use of fertilization in managing site fertility	313
5.3.1	Impact mechanisms on growth	313
5.3.2	Growth responses	315
5.4	Timber harvesting and impacts on nutrient resources	316
5.4.1	Impacts	316
5.4.2	Nutrient management and sustainable forest production — a case	317
6	Management of abiotic risks	320
6.1	Concepts	320
6.2	Risks of wind damage.....	321
6.2.1	Mechanisms	321
6.2.2	Wind risks under current climate	324
6.2.3	Wind risks under climate change	326
6.3	Risk of snow damage.....	327
6.3.1	Mechanisms	327
6.3.2	Snow risks under current and changing climate	328
6.4	Risk of wild fire	330
6.4.1	Mechanisms	330
6.4.2	Fire risk under current and changing climate	332
6.5	Risk of frost damage.....	332
7	Management of biotic risks	332
7.1	Concepts	332
7.1.1	Forest herbivores	332
7.1.2	Characteristics of pest outbreaks	334
7.2	Herbivorous species attacking trees.....	335
7.2.1	Herbivore abundance related to tree species.....	335
7.2.2	Host plant size and growth form.....	335
7.2.3	Taxonomic affinities of host plant	336
7.2.4	Insect recruitment by introduced plants.....	336
7.2.5	Role of introduced herbivores in forest ecosystems	337
7.3	Resistance mechanism of trees against herbivores and pathogens	338
7.3.1	Constitutive resistance	338
7.3.2	Seasonal variation of constitutive resistance	339
7.3.3	Induced defence	340

7.4 Models explaining variation in chemical defence between plants 345

7.5 Management of forest pests..... 347

 7.5.1 Tree resistance..... 347

 7.5.2 Effect of environmental factors on tree resistance 348

 7.5.3 Biological control of pest management..... 349

 7.5.4 Viruses in pest management 350

 7.5.5 Bacteria in pest management 351

 7.5.6 Fungi in pest management..... 351

 7.5.7 Chemical control in pest management 352

 7.5.8 Signalling chemicals in pest management 353

 7.5.9 Effects of forest management and structure on forest pests 355

7.6 Climate change and forest pests 357

8 Management for adaptation to climate change 359

8.1 Concepts 359

8.2 Adaptation in forestry and adaptive management..... 360

 8.2.1 Assessment of needs 360

 8.2.2 Framework for adaptive management..... 362

 8.2.3 Management for adaptation — a European example..... 363

References 366

CHAPTER 7

Timber procurement

1	Introduction.....	376
1.1	Timber assortments.....	378
2	Harvesting and timber transport.....	381
2.1	Harvesting methods and systems.....	381
2.2	Logging machinery.....	385
2.3	Harvesting woody biomass for energy.....	393
2.3.1	Harvesting of logging residues in connection with final fellings.....	394
2.3.2	Harvesting of forest energy biomass from early thinnings.....	395
2.3.3	Chipping.....	396
2.4	Opening forest areas for logging by constructing roads.....	396
2.5	Storing timber.....	399
3	Organising and planning harvesting operations.....	400
3.1	Organising timber harvesting.....	400
3.2	Planning and monitoring of timber procurement.....	401
4	Harvesting in industrial plantations.....	406
4.1	Harvesting conditions.....	406
4.2	Logging technology.....	408
4.3	Debarking of wood during logging.....	409
5	Damage to timber.....	409
5.1	Causes of damage.....	409
5.2	Abiotic damage.....	410
5.3	Fungal decay.....	411
5.4	Comparison of rot types and prevention of rot.....	412
5.5	Attack by insects and aquatic organisms.....	413
5.6	Decay caused by bacteria and biological reactions.....	414
5.7	Influence of storage on mill processes.....	414

5.8	Decay in chip storage	415
5.9	Storage of bark	419
6	Environmental impacts of timber harvesting	419
6.1	Common conceptions	419
6.2	Energy consumption and emissions	421
6.3	Impacts on forest site in thinnings.....	422
6.4	Impacts on biodiversity, multiple-use of forests, and landscape.....	423
7	Timber trade.....	424
7.1	Purchasing timber on domestic markets	424
7.2	International timber markets	425
	References	427

CHAPTER 8

Timber measurement

1	Principles and concepts	434
2	Aims of measurement	436
3	Measurement of standing trees	437
4	Timber measurement during logging	439
4.1	Mechanised logging	439
4.1.1	Method description	439
4.1.2	Self-control and calibration of measuring device	441
4.1.3	Controlling timber measurement	442
4.1.4	Accuracy of measurement	443
4.1.5	Optimisation of crosscutting	444
4.2	Motor-manual logging	444
4.2.1	Weighing timber with forwarder's grapple-mounted scales	444
4.2.2	Other methods	445
5	Timber measurement at roadside	446
5.1	Saw and veneer logs — softwoods	446
5.2	Saw and veneer logs — hardwoods and special timber assortments	447
5.3	Measurement of stacked timber — concepts	448
5.4	Measurement of frame volume of stacked timber	448
5.5	Measurement of stack density of stacked timber	449
5.6	Weighing timber stacks with grapple-mounted scales on timber trucks	451
6	Timber measurement at mill	452
6.1	Concepts	452
6.2	Weight measurement of timber	453
6.3	Measurement of stack volume of pulpwood on the vehicle	454
6.4	Frame-scanning of pulpwood volume	454
6.5	Sampling-based frame and bundle measurement of pulpwood	457

6.6	Automatic pulpwood measurement and grading stations.....	457
6.7	Measurement of volume of saw and veneer logs.....	458
6.8	Measurement of by-products from mechanical wood processing	459
7	Detection of timber quality and moisture content	460
7.1	Concept of timber quality	460
7.2	Quality measurement methods.....	460
	7.2.1 Harvesting and transportation	460
	7.2.2 Pulpwood at mills.....	460
	7.2.3 Saw and veneer logs at mills.....	461
7.3	Determination of moisture content	462
	7.3.1 Concept and uses	462
	7.3.2 Selected methods	462
	7.3.3 Development potential	463
8	Costs involved in timber measurement	464
8.1	Concepts	464
8.2	Harvester-based measurement	464
8.3	Truck- or forwarder-based measurement.....	465
8.4	Measurement at roadside	465
8.5	Measurement at the mill	466
9	Further development of timber measuring methods	466
	References	470

CHAPTER 9

Wood markets and the cost of wood

1	Introduction.....	476
2	Economic structures in wood procurement	476
2.1	Non-industrial, private forest ownership.....	476
2.2	Industrial private forest ownership	477
2.3	Public ownership	478
3	Economics of forest management and wood production	479
3.1	Ownership goals	479
3.2	Revenues from timber sales.....	479
3.3	Costs	480
3.4	Financial analysis of wood production	481
4	Roundwood markets	484
5	Summary	486
	References	488

CHAPTER 10

Global forest related policies and governance

1	Background	492
2	Main issues on the global forest agenda.....	492
2.1	Deforestation, degradation and desertification.....	492
2.2	Challenges of multi-dimensional sustainable forest management.....	492
2.3	Climate change and bioenergy	494
2.4	Biodiversity	494
2.5	Other forest benefits and ecosystem services	494
2.6	Forests and poverty reduction	495
2.7	Future, competitiveness and performance of forest-based industries and products	495
2.8	Governance.....	496
3	International regimes, nation states and global governance	497
4	Global forest-related processes and sustainable management of world forest resources	498
4.1	Two forerunners.....	498
4.1.1	FAO Forestry — six decades of information, collaboration and capacity development	498
4.1.2	ITTO and ITTA — can trade save tropical forests?	501
4.2	UNCED environmental conventions.....	503
4.2.1	Convention on Biological Diversity and its expanded forest programme	503
4.2.2	Framework Convention on Climate Change (FCCC) and forest issues.....	505
4.2.3	Convention to Combat Desertification — the Issue of Africa and Central Asia	507
4.3	UNCED-initiated forest processes.....	508
4.3.1	Regional forest processes and the development of criteria and indicators for sustainable forest management	508
4.3.2	From UNCED to UNFF: continuing forest dialogue and search for the Forest Convention	512

5	Market-based and market-oriented actors and processes	517
5.1	World Bank and strategic forest financing	517
5.2	World trade organization (WTO): free trade and forest sustainability?.....	519
5.3	Forest industry federations — between bark and wood	521
5.4	Forest owners' federations raising the profile of non-industrial private forestry	522
5.5	Forest certification — a battle for market shares	523
5.6	Forest law enforcement governance to combat illegal logging.....	525
6	Civil society related actors and processes	527
6.1	ENGOS and market campaigns	527
6.2	Labour unions in a defence battle	530
6.3	Other civil society actors and processes.....	531
	6.3.1 Indigenous peoples	531
	6.3.2 World Social Forum	531
7	Towards improved global governance of forests?	533
7.1	Diagnosis of the state of global forest governance: between a regime, governance and non-governance?	533
7.2	Reasons for weak global forest governance	535
7.3	Improved forest governance: a log-jam or slow progress?.....	538
	References	541

CHAPTER 11

The forest sector in a local and global context

1	The forest sector and national economy	548
1.1	Concepts	548
1.2	Input-output tables	548
1.3	Production model.....	549
1.4	Total output.....	551
1.5	Value added.....	553
1.6	Employment.....	554
2	Forest industries, forestry and forest clusters in the world economy	555
2.1	Concepts	555
2.2	European forest cluster as an example of international forest clusters.....	555
3	Globalisation of forestry and forest industry	556
3.1	Pulp industry is becoming more global and paper industry more local	556
3.2	Focus of pulp production shifting to fast-growing plantations.....	557
3.3	Pulp industry based on fast-growing plantations is competitive both in terms of cost and quality	557
3.4	Global forest industry as an example of a sustainable industry.....	558
	References	560
	Appendix	561
