

Papermaking Science and Technology

a book series
covering the latest
technology and
future trends

Book 5

Mechanical Pulping

Second Edition

Totally updated version

Book editor

Bruno Lönnberg, D.Sc. (Tech.), Professor (emeritus), Åbo Akademi University

Publisher

Paper Engineers' Association/Paperi ja Puu Oy

Table of Contents

1	Introduction.....	9
2	Idea of mechanical pulping	17
3	History of mechanical pulping	23
4	Fundamentals of mechanical pulping.....	35
5	Wood raw materials.....	68
6	Grinding and pressure grinding	116
7	Thermomechanical pulping.....	174
8	Chemimechanical pulping.....	247
9	Screening and cleaning	282
10	Reject refining.....	327
11	Bleaching of mechanical pulps.....	360
12	Thickening, storage and post-refining	399
13	Flowsheets for various mechanical pulping and screening processes	419
14	Environmental impacts of mechanical pulping.....	430
15	The character and properties of mechanical pulps	456
16	Future outlook.....	515
	Conversion factors.....	535
	Index.....	537

CHAPTER 1

Introduction

1	Contents of the book	10
2	How to interpret the data	11
3	Abbreviations used	12

CHAPTER 2

Idea of mechanical pulping

1	Wood for mechanical pulping	18
2	Wood treatments in mechanical pulping	18
3	Brief description of the mechanical pulping	20
4	Characteristics of mechanical pulps	21
5	End uses of mechanical pulps	22

CHAPTER 3

History of mechanical pulping

1	Invention of the grinding process	24
2	Development of the grinding process	25
2.1	First commercial grinders	25
2.2	First reject refiner	28
2.3	Brown groundwood and chemigroundwood processes.....	28
2.4	Hot grinding process.....	28
2.5	Grindstone development	28
2.6	Development of main grinder types.....	29
2.7	Pressure grinding (PGW)	29
3	Thermomechanical pulping (TMP)	30
3.1	Groundwood reject refining	30
3.2	Original thermomechanical pulping process for hardboards	30
3.3	Development of RMP for printing papers	31
3.4	Development of modern TMP	32
4	Novel methods to produce mechanical pulps	33
5	Development of testing methods	33
	References	34

CHAPTER 4

Fundamentals of mechanical pulping

1	Rheological behaviour of wood	36
2	Fundamental mechanisms in mechanical pulping, especially grinding	40
2.1	Principles of defibration of wood by grinding	40
2.1.1	Breakdown of the fibre structure by fatigue	41
2.1.2	Removal of fibres from wood by peeling action	43
2.2	Wood structure parameters affecting the breakdown process	44
2.2.1	Thin-/thick-walled fibres	45
2.2.2	Layer structure of the fibre	45
2.2.3	Wood, a viscoelastic composite polymer.....	45
2.3	Main physical parameters affecting wood grinding.....	46
2.3.1	Wood in a cyclic stress field	46
2.3.2	Influence of amplitude, frequency and temperature	47
2.4	Energy consumption in grinding	51
3	Fundamental mechanisms in refining	52
3.1	Development of fibre properties during refining.....	53
3.2	Traditional descriptions of refining.....	53
3.3	Theoretical approaches to understanding refining	54
3.4	Measured data from the plate gap	55
3.5	Present knowledge and understanding of the fundamentals in refining	57
4	Reasons for differences in energy consumption between grinding and refining	58
4.1	Energy consumption in grinding and refining.....	58
4.2	Reasons for high energy consumption.....	58
4.3	Reasons for high energy consumption in chip refining.....	59
	References	62

CHAPTER 5

Wood raw materials

1	General wood properties	70
1.1	Wood basic density	71
1.2	Wood moisture content	72
1.3	Juvenile wood.....	74
1.4	Heartwood	74
1.5	Unsuitable parts of the wood raw material	75
2	Wood species used in mechanical pulping	78
2.1	Wood and fibre characteristics	79
2.1.1	Softwoods: spruces and pines.....	79
2.1.2	Hardwoods: poplars and eucalyptus	80
2.2	Properties of thermomechanical pulps	82
2.2.1	Softwoods.....	82
2.2.2	Hardwoods.....	84
2.3	Properties of groundwood pulps.....	84
2.3.1	Softwoods.....	85
2.3.2	Hardwoods.....	88
3	Variations in properties between trees.....	90
3.1	Genetic control of wood properties.....	90
3.2	Within-tree property variation	91
3.2.1	Fibre length.....	92
3.2.2	Fibre width.....	93
3.2.3	Cell wall thickness	94
3.2.4	Cross-sectional cell wall area.....	96
3.2.5	Microfibril angle	96
3.3	Within-stand variation	97

4 Pulp properties of different wood assortments..... 98

4.1 Pulpwood vs. sawmill chips 99

4.2 Butt log vs. top log 102

4.3 Heartwood vs. sapwood 103

4.4 Slow-grown vs. fast-grown wood..... 103

5 Seasonal variations in wood properties 104

6 Effect of wood supply practices on wood properties..... 105

7 Effect of wood handling operations on wood and chip properties..... 106

References 109

CHAPTER 6

Grinding and pressure grinding

1	Introduction.....	118
2	Grinder productivity.....	119
3	Two-pocket wood grinders for groundwood processes	121
3.1	Tampella two-pocket atmospheric SGW grinder	121
3.2	Metso atmospheric SGW grinder	121
3.3	Montague two-pocket SGW grinder.....	123
3.4	Metso pressure grinders	124
3.5	Continuous Metso two-pocket grinder.....	128
4	Wood grinding processes	128
4.1	Atmospheric groundwood (SGW).....	128
4.2	Pressure groundwood processes.....	129
4.2.1	PGW95 process.....	132
4.2.2	PGW70 process.....	134
4.2.3	PGW-S120 process	135
5	Chain grinders and thermogroundwood (TGW).....	136
6	Grindstones and grindstone treatments	140
6.1	Ceramic grindstones	140
6.2	Abrasive specifications and their influence on grindstone behaviour.....	141
6.3	New grinding surfaces	143
6.4	Grindstone treatments	143
6.5	Burr treatments for grindstones	144
6.5.1	Grindstone truing	145
6.5.2	Grindstone sharpening	145
6.5.3	Dulling of grindstone	146
6.5.4	Grindstone grooving	146

6.6	Grindstone surface control with ultra-high-pressure water	147
6.6.1	Water jet equipment.....	149
6.6.2	Grindstone treatment with water jet	149
6.6.3	Impacts of water jet conditioning on grinding process variables and pulp properties	149
6.6.4	Water Jet Control system	151
7	Grinder feeding systems	151
7.1	Feeding system for chain grinders	152
7.2	Charging system for pocket grinders.....	153
8	Grinding control	155
8.1	Control requirements	155
8.2	Grinding from a control viewpoint.....	156
8.3	Grinding process.....	156
8.4	Hierarchy of grinding controls	158
8.4.1	Surface wear compensation.....	158
8.4.2	Batch control.....	159
8.5	Grinding control strategy.....	161
8.5.1	Grinder group control strategy.....	161
8.5.2	Optimum operating point strategy	163
8.5.3	Water Jet Control	163
9	PGW pulps and various paper grades.....	164
9.1	Pulp properties.....	165
9.2	Suitability for various paper grades	166
	References	169

CHAPTER 7

Thermomechanical pulping

1	Introduction to thermomechanical pulping	176
1.1	Principles of refiner mechanical pulping.....	176
1.2	Main refiner types.....	177
1.3	Thermomechanical pulping process.....	177
1.4	Energy consumption and yield	178
2	Handling and pretreatment of chips	179
2.1	Chip washer.....	180
2.2	Dewatering of chips.....	181
2.3	Chip wash water system	181
2.4	Chip preheating	182
2.5	Chip impregnation systems	183
3	Disc refiner	186
3.1	Refiner concepts of different manufacturers.....	186
3.2	Single-disc (SD) refiners	186
3.2.1	Andritz SB 150 and 170 single-disc refiners.....	186
3.2.2	Metso RGP SD single-disc refiners	188
3.2.3	Other single-disc refiners: SD 65 and HXD64	189
3.3	High-capacity TMP refiners	192
3.3.1	Metso RGP CD refiner.....	192
3.3.2	Andritz Twin refiner	194
3.4	Double disc (DD) refiners	196
3.5	Processing pulp and steam in the refiner line	198
3.6	Refining conditions and design parameters.....	202
4	Refiner segments — the “heart” of the refining process	204
4.1	Refiner segment design	206
4.2	Materials of refiner segments.....	208

5	Main TMP process types	209
5.1	“Standard” TMP line	209
5.2	Single-stage refining.....	213
5.3	Energy-saving TMP processes	214
5.3.1	High-speed and high-intensity TMP refining	215
5.3.2	Chip pretreatment.....	217
5.3.3	Third-stage post-refining	218
5.3.4	Energy savings with refiner plate development.....	218
6	Refiner type and process conditions and their impact on pulp properties.....	221
6.1	Intensity of refining	221
6.2	Influence of refiner type	222
6.3	Refiner speed.....	223
6.4	Pulp consistency	224
6.5	Production rate	226
6.6	Preheating and steaming of chips	226
6.7	Temperature in preheating and refining.....	228
7	Process control.....	229
7.1	Control requirements	229
7.2	Basic controls	230
7.3	Plate gap control.....	231
7.4	Production rate	231
7.5	Refining consistency	232
7.6	Refining pressures.....	232
7.7	Pulp quality control	233
8	Heat recovery.....	234
8.1	Amount and composition of TMP steam	234
8.2	Reboiler for condensing TMP steam and generating clean steam	236
8.3	Auxiliary heat exchangers	236
8.4	Start-up scrubber for TMP steam	238
8.5	Surface condenser for low-pressure TMP steam	238
8.6	Turpentine recovery	240
8.7	Heat recovery as a part of the low-pressure steam net	242
	References	243

CHAPTER 8

Chemimechanical pulping

1	Introduction.....	248
2	Process alternatives	249
2.1	Position of the chemical treatment stage in the process	249
2.2	Type of chemical treatment.....	250
3	Chemical stage	251
3.1	Sulphonation chemistry	252
3.2	Effect of process variables on the sulphonate content	254
4	The mechanical stage	255
4.1	Dynamic mechanical properties of chemically treated wood and fibres	257
4.2	Kind of rupture at fiberising.....	257
5	Process design and operation.....	258
5.1	General schemes	258
5.2	Chemical pretreatment	260
5.3	Refining	262
5.4	Drying.....	263
5.5	Baling	264
6	Special processes.....	265
6.1	Interstage sulphonation.....	265
6.2	Reject sulphonation	265
6.3	Chemical treatment with alkaline peroxide.....	266
6.3.1	APMP process.....	267
6.3.2	P-RC APMP process	268
6.4	Alkaline peroxide treatment of reject.....	268
6.5	Ozone treatment	269
7	Fibre and pulp properties	270
7.1	Fibre properties.....	270
7.2	Pulp properties.....	271
8	End uses.....	275
9	Market pulps.....	276
	References	278

CHAPTER 9

Screening and cleaning

1	Background	284
1.1	Principle and objectives of screening	284
1.1.1	Screening and fractionation.....	286
1.1.2	Screening principle – barrier and probability screening	287
2	Design of a pressure screen.....	288
2.1	General construction	288
2.2	Feed arrangement.....	290
2.3	Screen basket geometry	290
2.4	Rotor design	291
3	Flows within the screen	292
3.1	Axial flow in screen basket and reject removal.....	292
3.2	Radial flow in screen basket	293
3.3	Tangential flow in screen basket.....	293
3.4	Flow near basket surface and apertures.....	294
3.5	Turbulence, pulsation and backflow	294
4	Characterisation of screening and fractionation	296
4.1	Basic equations	296
4.2	Screening efficiencies.....	298
4.3	Assessment of performance with operating curves	299
5	Parameters affecting pressure screen performance	300
5.1	Design parameters.....	300
5.1.1	Rotor design.....	301
5.1.2	Screen basket geometry	302
5.2	Operating parameters	304
5.3	Furnish parameters.....	306
6	Energy consumption and power in pressure screening	306

7	Screening systems	308
7.1	Main-line screening of SGW and PGW.....	309
7.2	Main-line screening of TMP and CTMP.....	310
7.3	Screening of rejects.....	311
8	Control of screening	312
8.1	Control of a single screen.....	312
8.2	Control of parallel screens and screens in series.....	313
8.3	Control of two-stage screening	314
8.4	Control of multi-stage screening	314
8.5	On-line pulp quality measurements and control of screening	314
9	Cleaning and sand removal.....	316
9.1	Theory	316
9.2	Cleaner types	318
9.3	Cleaning systems	319
9.4	Sand removal	319
9.5	Control of cleaning	321
	References	322

CHAPTER 10

Reject refining

1	Fibres, equipment and systems	328
2	Reject handling	329
2.1	Thickening	329
2.1.1	Bow screen	330
2.1.2	Screw press	330
2.1.3	Twin-roll press	331
2.1.4	Twin-wire press	333
2.2	Pretreatment	334
3	Reject refiners	335
3.1	Reject refining systems	338
4	Control and operating principles	341
4.1	Main and control variables	342
4.2	Process conditions and disturbances	344
4.2.1	HC refining	347
4.2.2	LC refining	349
5	Effects of reject refining on pulp and paper properties	350
5.1	Printing paper grades	354
5.2	Board grades	355
5.3	Hardwood CTMP	355
	References	357

CHAPTER 11

Bleaching of mechanical pulps

1	Bleaching or brightening	362
2	Factors affecting the brightness of high-yield pulps	362
3	Principles of bleaching high-yield pulps	366
4	Peroxide bleaching	367
4.1	Reactions.....	367
4.2	Process variables.....	368
4.2.1	Peroxide dose.....	368
4.2.2	Removal of transition metal ions.....	369
4.2.3	Pulp pH.....	370
4.2.4	Stabilising agents.....	373
4.2.5	Consistency.....	375
4.2.6	Temperature.....	376
4.2.7	Retention time.....	376
4.2.8	Acidification.....	376
4.3	Bleach plant design and operation.....	377
4.3.1	Single-stage medium-consistency bleaching.....	377
4.3.2	High-consistency bleaching.....	378
4.3.3	Medium- and high-consistency peroxide bleaching.....	379
4.3.4	Refiner bleaching.....	381
4.3.5	Flash dryer bleaching.....	381
5	Dithionite (hydrosulphite) bleaching	381
5.1	Reactions.....	381
5.2	Process variables.....	383
5.2.1	Dithionite (hydrosulphite) dose.....	383
5.2.2	Chelating agents.....	384
5.2.3	Pulp pH.....	384

5.2.4	Consistency	384
5.2.5	Temperature	385
5.2.6	Retention time.....	385
5.3	Bleach plant design and operation	385
5.3.1	Tower bleaching.....	385
5.3.2	Two-stage bleaching with peroxide and dithionite	385
5.3.3	Chest bleaching	387
5.3.4	Refiner and grinder bleaching	387
6	Other bleaching chemicals.....	388
6.1	Potential bleaching chemicals.....	388
6.2	Sodium bisulphite	388
6.3	Formamidine sulphinic acid	389
7	Bleaching of chemimechanical pulps.....	389
8	Brightness reversion	390
8.1	General.....	390
8.2	Determination of brightness reversion.....	391
8.3	Thermal brightness reversion.....	392
8.4	Light-induced brightness reversion	393
9	Effect on yield and papermaking properties	393
9.1	Dithionite (hydrosulphite) bleaching	393
9.2	Peroxide bleaching.....	394
10	Development of the bleaching technologies	395
	References	396

CHAPTER 12

Thickening, storage and post-refining

1	Thickening	400
1.1	Disc filters	400
1.2	Broke deckers.....	402
1.3	Bow screens	402
1.3.1	Screw presses, twin-roll presses and twin-wire presses	403
2	Storage of mechanical pulps	404
2.1	Storage systems	404
2.2	Effect of storage on pulp properties.....	405
3	Post-refining	406
3.1	Objectives of post-refining	406
3.2	Equipment and process systems	407
3.3	Refining conditions and operations.....	408
3.4	Refining effects.....	413
	References	418

CHAPTER 13

Flowsheets for various mechanical pulping and screening processes

1	Groundwood and thermomechanical pulping processes	420
1.1	SGW and PGW pulp screening processes	422
1.2	TMP and CTMP pulp screening processes	422
2	Mechanical pulping processes for newsprint-paper grades	422
2.1	Newsprint-grade PGW pulp screening processes	423
2.2	Newsprint-grade TMP pulp screening processes	424
3	Mechanical pulping processes for SC- and LWC-paper grades	425
3.1	SC- and LWC-grade SGW and PGW pulp screening processes	425
3.2	SC- and LWC-grade TMP pulp screening processes	426
4	Mechanical pulping processes for board grades	427
4.1	Board-grade SGW and PGW pulp screening processes	428
4.2	Board-grade TMP and CTMP pulp screening processes	428
	References	429

CHAPTER 14

Environmental impacts of mechanical pulping

1	Woodyard, debarking, pulping and bleaching processes	432
2	Emissions from processes	433
3	Wood and chip storage.....	435
3.1	Trends in techniques.....	435
3.2	Changes in wood during storage.....	435
4	Debarking and chipping	436
4.1	Wet and dry debarking.....	436
4.2	Water circulation systems in debarking.....	436
4.3	Need for water	437
5	Treatment of debarking effluent	437
5.1	Composition and concentration of debarking circulation water.....	437
5.2	Effluent load.....	438
6	Release of wood components into water in mechanical pulping and bleaching	438
6.1	Discharge data for different pulping processes.....	438
6.2	Influence of bleaching stages.....	439
6.3	Chemical character of released wood components.....	440
6.4	Toxic components in effluents.....	443
7	Factors influencing release of wood components into water.....	443
7.1	Effect of pulping conditions.....	443
7.2	Effects of wood quality.....	444
8	Evaporation of compounds in mechanical pulping	445
8.1	Volatility of wood compounds.....	445
8.2	Contents of volatile compounds	445
9	Water circulation systems in mechanical pulping plants.....	446
9.1	Connection between pulp mill and paper mill	446
9.2	Washing stage	447

10	Treatment of mechanical pulping effluents.....	448
10.1	Purification methods	448
10.2	Potential for installing internal cleaning stages in a mechanical pulp plant	449
10.3	Zero effluent technology	449
11	Carbon footprint of a mechanical printing paper.....	450
	References	452

CHAPTER 15

The character and properties of mechanical pulps

1	Origin of mechanical pulp properties	458
2	Mechanical pulp properties and paper/board grades.....	461
2.1	Mechanical printing papers.....	461
2.1.1	Newsprint	464
2.1.2	SC paper.....	465
2.1.3	LWC paper	466
2.2	Mechanical-pulp board	466
3	Development of pulp properties.....	467
3.1	Fibre shortening.....	467
3.2	Fibre-wall thickness and structure	468
3.3	Pulp fractions and fibre properties.....	469
3.3.1	Long-fibre fraction	470
3.3.2	Middle fraction.....	470
3.3.3	Fines fraction	471
3.3.4	Properties of fractions for pulp characterisation.....	474
3.4	Latency in mechanical pulps.....	476
3.5	Mechanical pulp fibres and paper recycling.....	476
4	Properties of pulp suspensions and their characterisation.....	478
4.1	Pulp property versus method	478
4.2	Methods for determining drainability	479
4.2.1	Canadian Standard Freeness, Schopper-Riegler value and drainage time	479
4.2.2	Water retention value	480
4.2.3	Specific filtration resistance, specific surface area and settling rate	480
4.2.4	Water quality and its effect on drainage	481
4.3	Methods for determining fractional composition.....	482
4.4	Methods for determining shive content	485
4.5	Methods for determining fines properties.....	486

5	Fibre properties and characterisation methods	488
5.1	Fibre property versus method.....	488
5.2	Methods for determining fibre dimensions	489
5.2.1	Fibre length.....	489
5.2.2	Fibre form	491
5.2.3	Cross-sectional dimensions of fibres	492
5.3	Methods for determining fibre coarseness	494
5.4	Methods for determining fibre wall structure.....	495
5.4.1	Fibre wall damage.....	495
5.4.2	Internal fibrillation	496
5.4.3	Fibre wall dimensions along the fibre length axis	497
5.4.4	Flexibility and stiffness of fibres	498
5.5	Methods for determining fibre surface properties.....	498
5.5.1	External fibrillation	498
5.5.2	Fibre surface roughness.....	499
5.5.3	Chemical composition of fibre surfaces	500
6	Handsheet properties and paper testing	501
6.1	Preparation of handsheets	501
6.1.1	Handsheets for testing physical properties except optical properties	501
6.1.2	Handsheets for testing optical properties.....	502
6.2	Testing of handsheet properties	502
6.3	Typical sheet properties of mechanical pulps	503
	References	505

CHAPTER 16

Future outlook

1	Future demand for mechanical pulps	516
1.1	Development of paper demand 2010–2020	516
1.2	Furnish trends.....	518
1.3	Production of mechanical pulps	520
1.4	Future consumption of mechanical pulps	522
2	Paper and mechanical pulp quality development	522
2.1	General quality characteristics	522
2.2	Newsprint	522
2.3	Supercalendered (SC) papers.....	523
2.4	Coated mechanical and coated wood-free papers.....	523
2.5	Carton boards	523
3	Energy consumption of GW and TMP	524
3.1	General trends	524
3.2	Possibilities to reduce specific energy consumption	524
3.3	Consequences of electric energy savings.....	526
4	Impact of the increasing use of recycled fibre	527
5	Raw material availability	528
6	Process development	530
6.1	Pulping capacity development	530
6.2	Advantages and disadvantages of various mechanical pulping processes	531
6.3	SWOT analysis for mechanical pulping	531
	References	533
